Installation Diagram

NOTES:

1. Allow at least 21" (53.3 cm) clearance in front of oven for door depth when it is open.
2. Dimension G (cutout depth) is critical to the proper installation of the built-in oven. If the oven trim does not butt against the cabinet, or if noise is heard on convection models, verify dimension G to assure it is the required depth.
3. For a cutout height greater than 27³/₄" (70.5) add 2" (5 cm) wide wood shims of appropriate height to each side of the opening under the appliance side rails. You can order a larger bottom trim through a service center.
4. If the junction box is below the oven, longer conduit cables are available through a service center.
