Step-by-Step Guide: How to Install ILVE's Easy Glide Oven Racks

Step 1: Remove the Oven Rack

The first step in installing your ILVE Easy Glide oven racks is to remove the existing rack from the oven. This will make it easier to install the extension glides and ensure there is no obstruction when working with the oven's interior.

- Gently pull the current oven rack out of the oven. Be careful not to force it if it's stuck—sometimes a gentle wiggle will release it.
- Once the rack is removed, set it aside in a safe space where it won't be damaged.

Removing the existing rack gives you the space you need to fit the extension glides properly.

Step 2: Place the Glides Between Any of the Rack's Tines

Now that the oven rack is removed, it's time to install the extension glides. These glides are designed to provide smooth movement for your oven racks, making them much easier to adjust.

- Take the extension glides and hold them at the appropriate level for where you want to install the new rack.
- Position the glides between the tines of the rack. The tines are the metal supports that run along the sides of the oven rack, so ensure that the glides are placed correctly in the space between them.
- Make sure the extension glides are centered on the rack and aligned with the tines for easy installation.

This step is essential as it ensures the glides are placed in the right position to support smooth movement once the oven rack is in place.

Step 3: Point the Connectors to the End of the Tines

Once the extension glides are positioned properly, the next step is to connect them securely to the rack.

- Look for the connectors at the ends of the extension glides. These connectors are the parts that will lock into place to ensure the glides stay firmly attached to the rack.
- Point the connectors towards the end of the tines. It's important that the connectors are properly aligned with the ends of the tines to ensure that the glides lock into place correctly.
- Double-check that the connectors are facing the right way before proceeding.

This step ensures that the glides will be properly attached and locked in place for secure and safe operation.

- Take a moment to ensure the glide is securely fastened. Gently pull on the rack to confirm that it is locked into place and won't slip or come off during use.

This step is crucial as it ensures that the glides are securely attached and will provide smooth, reliable movement during use.
