STANDARD INSTALLATION

HELPFUL TIPS

- A** Mounting the junction box in this location will also allow for front accessibility through access panel.
- B** Water supply area.

⚠ WARNING:

The refrigerator is top heavy and must be secured to prevent the possibility of tipping forward. Failure to do so may result in death or serious injury.

The information below is for cabinet design only. When installing the anti-tip system you must use the product installation instructions.

Determine your installation construction and required anti-tip configuration:

- C** **Installed Under Soffit**
After installing unit into installation opening, raise grille panel and screw metal case sides to adjacent cabinet. When installed under a soffit, the soffit cannot exceed 24" deep. The top case trim overlaps the bottom of the soffit.
 - D** **Wooden Wall Studs and No Soffit**
 - Cut a 2" x 4" block and secure to brackets provided.
 - Secure brackets to back wall of opening at 84" or your installation height from the floor.
 - E** **Metal Wall Studs and No Soffit**
This method requires securely fastened cabinets on both sides and a 3/4" minimum wood brace above unit, with its front surface 24" from back wall.
 - After installing unit into opening, raise grille panel and attach metal case top trim to 3/4" minimum wood brace.
 - The brace spanning the enclosure must be securely fastened to cabinets on both sides.
- See Installation Instructions for detailed instructions.
