

LAB11R9

36.25" x 28.5" x 28" (H x W x D)

-86°C capable ultra low chest freezer for laboratory and life science storage, with 9 vertical stainless steel box racks included

Highlights:

- Ultra low -85°C for the storage of biological samples, chemicals, select vaccines and antibiotics, industrial research, and other materials with strict temperature requirements
- Extra thick 4 1/2" insulation for efficient and stable cooling
- Includes 9 vertical box shelves in stainless steel

Product Features:

Ultra Low Temperature -85°C Chest Freezer	Designed for highly specialized cold storage applications of biological samples, DNA/RNA material, chemicals, select vaccines and antibiotics, and other substances with strict low temperature requirements
Advanced design	Interior walls feature more than 8 layers of D-shaped cooling pipes to ensure increased contact with the freezer walls in order to ensure maximum insulation and product efficiency
Manufactured by Elcold for Accucold	Designed and constructed in Denmark
Inner lids	Includes two removable inner lids for added protection from ambient air when opening the outer lid
Extra thick insulation	4 1/2" thick walls for added efficiency and stable cooling
9 Vertical box shelves included	Ships with 6 10-box shelves and 3 5-box shelves in stainless steel for added storage convenience
Factory installed lock	Exterior lock on the handle for reliable security (2 keys included)
Digital thermostat	Electronic microprocessor controls for precise temperature management, with temperature readout and controls externally located for added convenience

°C/°F Readout Temperature display can be alternated between Celsius or Fahrenheit to best suit your preference
