Child safety

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Destroy or recycle the carton, plastic bags, and any exterior wrapping material immediately after the refrigerator is unpacked. Children should never use these items to play. Cartons covered with rugs, bedspreads, plastic sheets or stretch wrap may become airtight chambers, and can quickly cause suffocation.

Important safety instructions

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

Do not store explosive substances such as aerosol cans with a flammable propellant in this appliance.

Do not operate the refrigerator in the presence of explosive fumes

Avoid contact with any moving parts of automatic ice maker.

Remove all staples from the carton. Staples can cause severe cuts, and also destroy finishes if they come in contact with other appliances or furniture.

WARNING!

Do not use electrical appliances inside the food storage compartments of the appliance unless they are of the type recommended by the manufacturer.

Proper disposal of your refrigerator or freezer

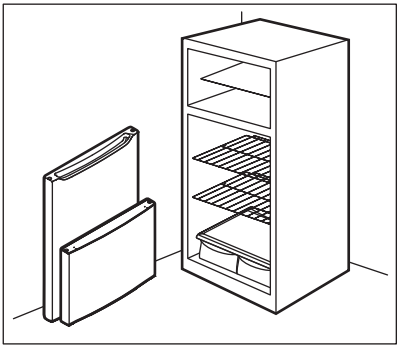

Risk of child entrapment

Child entrapment and suffocation are not problems of the past. Junked or abandoned refrigerators or freezers are still dangerous – even if they will sit for “just a few days”. If you are getting rid of your old refrigerator or freezer, follow the instructions below to help prevent accidents.

We strongly encourage responsible appliance recycling/disposal methods. Check with your utility company or visit www.energystar.gov/recycle for more information on recycling your old refrigerator.

Before you throw away your old refrigerator/freezer:

- Remove doors.
- Leave shelves in place so children may not easily climb inside.
- Have it removed by a qualified service technician.

IMPORTANT

CFC/HCFC Disposal

Your old refrigerator may have a cooling system that used CFCs or HCFCs (chlorofluorocarbons or hydrochlorofluorocarbons). CFCs and HCFCs are believed to harm stratospheric ozone if released to the atmosphere. Other refrigerants may also cause harm to the environment if released to the atmosphere.

If you are throwing away your old refrigerator, make sure the refrigerant is removed for proper disposal by a qualified technician. If you intentionally release refrigerant, you may be subject to fines and imprisonment under provisions of environmental legislation.

Electrical information

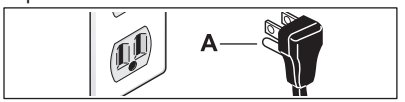

IMPORTANT

Turning on the appliance controls to OFF will disable the appliance cooling system but does not disconnect the power to the light bulb and other electrical components. To turn off power to the appliance you must unplug the power cord from the electrical outlet.

- The appliance must be plugged into its own dedicated 115 Volt, 60 Hz., 15 Amp, AC only electrical outlet. The power cord of the appliance is equipped with a three-prong grounding plug for your protection against electrical shock hazards. It must be plugged directly into a properly grounded three-prong receptacle. The receptacle must be installed in accordance with local codes and ordinances. Consult a qualified electrician. Avoid connecting the appliance to a Ground Fault Interrupter (GFI) circuit. Do not use an extension cord or adapter plug.
- If the power cord is damaged, it should be replaced by an authorized service technician to prevent any risk.
- Never unplug the appliance by pulling on the power cord. Always grip the plug firmly, and pull straight out from the receptacle to prevent damaging the power cord.
- Unplug the appliance before cleaning and before replacing the AC LED light bulb to avoid electrical shock. Use only a 5-watt or less AC LED light bulb.
- Performance may be affected if the voltage varies by 10% or more. Operating the appliance with insufficient power can damage the compressor. Such damage is not covered under your warranty.
- Do not plug the unit into an electrical outlet controlled by a wall switch or pull cord to prevent the appliance from being turned off accidentally.

WARNING!

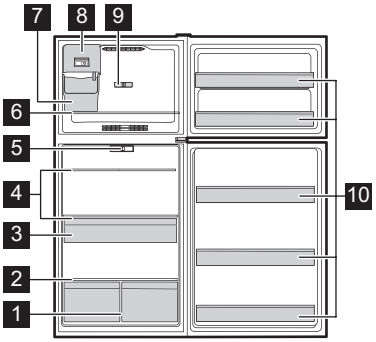

Do not, under any circumstances, cut, remove, or bypass the grounding prong (A). Always use the power cord with a three-prong grounded plug and grounding type wall receptacle.

Cleaning the appliance

IMPORTANT

Remove tape and glue residue from surfaces before turning the appliance on. Rub a small amount of liquid dish soap over the adhesive with your fingers. Rinse with warm water and dry with a soft cloth.

Do not use sharp instruments, rubbing alcohol, flammable fluids, or abrasive cleaners to remove tape or glue. These products can damage the surface of the appliance.

After you remove all of the package materials, clean the inside of the appliance before using it. Refer to Care and Cleaning.

Moving the appliance

IMPORTANT

The appliance is heavy. When moving the appliance for cleaning or service, raise the anti-tip bracket (refer to Setting the anti-tip brackets). Be sure to cover the floor with cardboard or hardboard to avoid floor damage. Always pull the appliance straight out when moving it. Do not wiggle or “walk” the appliance when trying to move it as you could damage the floor.

Location

- Choose a place that is near a grounded, non-GFCI, electrical outlet. Do not use an extension cord or an adapter plug.
- If possible, place the appliance out of direct sunlight and away from the range, dishwasher, or other heat sources.
- The appliance must be installed on a floor that is level and strong enough to support a fully loaded appliance.

- Consider water supply availability for models equipped with an automatic ice maker.

WARNING!

This appliance is intended for use in residential household and similar interior applications such as:
- Kitchen / kitchenette
- Pantry room
- Basement
- Enclosed garage
- Other interior residential type environments

CAUTION!

Do not install the appliance where the temperature will drop below 38°F (3°C) or rise above 110 °F (43 °C). The compressor will not be able to maintain proper temperatures inside the appliance.

NOTE

Do not block the lower front of the appliance. Sufficient air circulation is essential for the proper operation of the appliance.

WARNING!

Allow the following clearances for ease of installation, proper air circulation, and plumbing and electrical connections:
- Sides and top 3/8" (9.5 mm)
- Back 1" (25.4 mm)

NOTE

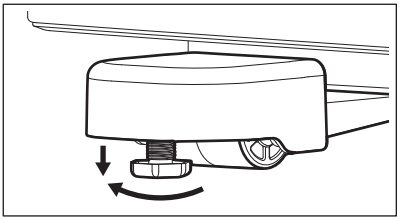

If you place the appliance with the door hinge side against a wall, you may have to allow additional space so the door can be open wider.

Cabinet leveling and door alignment

Guidelines for final positioning of appliance:
- All 4 corners of the cabinet must rest firmly on the floor.
- The cabinet should be level at the front and rear.
- The sides should tilt 1/4" (6 mm) from front to back to ensure that doors close and seal properly.
- Align the doors with each other and level them.

Setting the anti-tip brackets

The anti-tip brackets are located on the lower front corners of the cabinet. Lower the anti-tip brackets on each side clockwise until they contact the floor. Do not raise the cabinet.

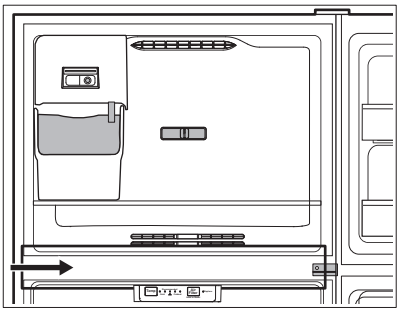

NOTE

The anti-tip bracket must be installed according to the instructions in the User Manual. Failure to do so may result in injury.

Mullion

When you first turn on the appliance, the mullion might be warm to the touch for the first 24 hours of operation. This is normal.

8 DOOR REMOVAL

Door Removal

CAUTION!

Before you begin, turn the appliance temperature control to OFF and remove the electrical power cord from the wall outlet. Remove any food from door shelves.

NOTE

The direction in which the appliance doors open (door swing) can be reversed, from left to right or right to left, by moving the door hinges from one side to the other. Reversing the door swing should be performed by a qualified person.

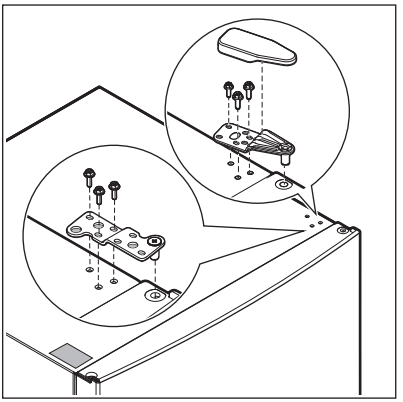

NOTE

We do not recommend to use an electric tool to unscrew and screw parts because it may damage the screw threads or cause screw heads to be stripped off.

NOTE

Keep the screws so they can be used on the opposite side.

1. Unplug the appliance.
2. Remove the top hinge cover (some models).
3. Using a 5/16" socket, remove the 3 screws from the hinge. Remove the tape covering the top hinge holes on the opposite side of the appliance. Remove the top hinge.

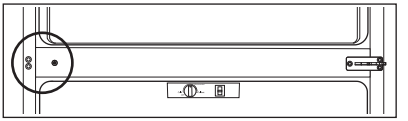

4. Carefully open the freezer door, and lift the door off of the center hinge pin. Set the door aside.

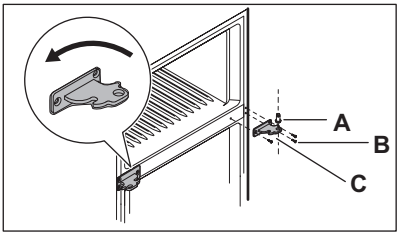

CAUTION!

Place the doors on a padded surface to avoid damage where they cannot fall and cause personal injury.

5. Unscrew the center hinge pin using an adjustable wrench and set it aside.
6. Open the refrigerator door and lift the door off of the bottom hinge pin. Set the door aside.
7. Remove the 3 pan head screws using a multi-bit screwdriver with a #2 square bit.

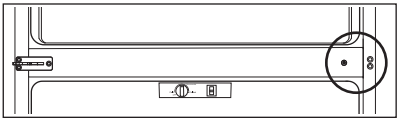

8. Remove the 3 screws from the center hinge using a multi-bit screwdriver with a #2 square bit. Flip the center hinge over and install it on the left side of the unit.

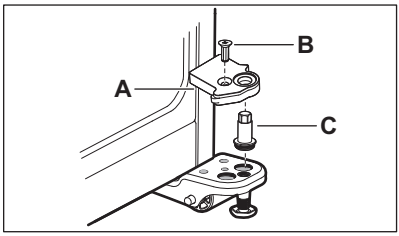

A. Hinge pin
B. Screws

   A. Remove the screw from the stopper using a multi-bit screwdriver with a #2 square bit and set it aside.
   B. Snap the bearing cover in the bearing and pull to remove the bearing. Twist the cover to release it from the bearing.
   C. Install the bearing on the opposite side of the door. Flip the stopper, replace it on the opposite side of the door, and replace the screw.

6. Repeat steps for the freezer door.
7. Place the bearing cover in the remaining open hole at the top of the refrigerator door.
8. Screw in and tighten the center hinge pin using an adjustable wrench.

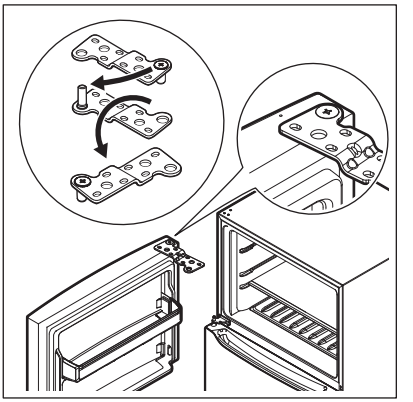

9. For type A top hinge, attach the top hinge to the freezer door. Lower the freezer door over the center hinge pin at a 90° angle, and close the door, holding it in place.

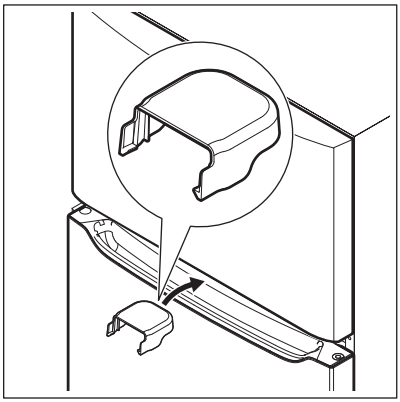

Type A hinge

10. For type B top hinge, remove the hinge pin from the top hinge. Put the hinge pin through the hole on the opposite side. Flip the top hinge over and attach it to the freezer door. Lower the freezer door over the center hinge pin at a 90° angle, and then close the door, holding it in place.

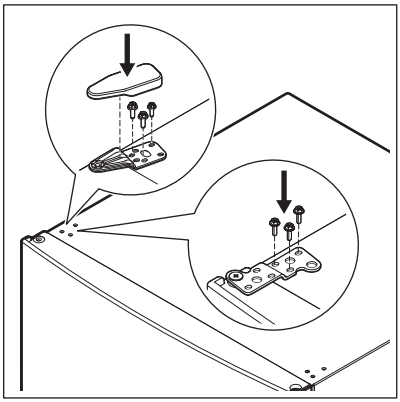

Type B hinge

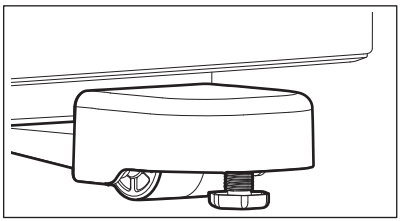

11. Place the lower hinge cover between the freezer door and refrigerator door to keep it level while attaching the top hinge.

12. Align the top hinge to the holes on the unit and attach screws with 5/16" socket, then place the top hinge cover on the unit (some models).

13. Replace the lower hinge covers.

12 DOOR HANDLE INSTALLATION

CAUTION!

Wear gloves and safety goggles. Use extreme caution when installing these handles. The rounded end of the handles may be sharp (some models).

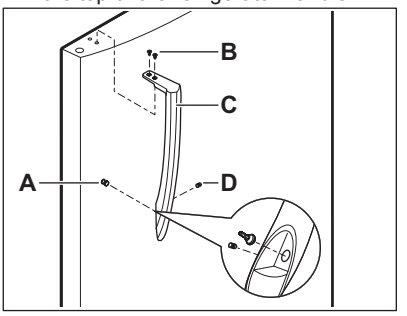

Metal handle

To attach the refrigerator/freezer metal handle:

1. Open the door.
2. Place the rounded part of the handle onto the shoulder screw on the face of the door and align the 2 holes:
   - for the refrigerator: at the top of the handle with the 2 holes at the top of the door.
   - for the freezer: at the bottom of the handle with the 2 holes at the bottom of the door.

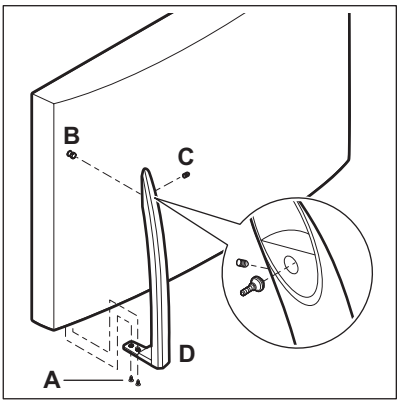

Do not tighten the set screw yet.

3. Install the 2 screws into:

Ensure the doors are set aside in a secure position where they cannot fall and cause personal injury.

Reverse and attach the freezer and refrigerator handles as shown. The handles may be easier to reverse while the doors are off.

14 DOOR HANDLE INSTALLATION

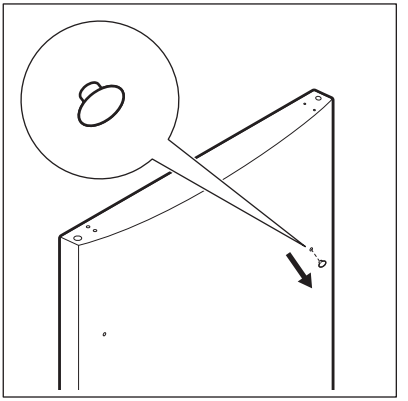

Unscrew and remove the handles.

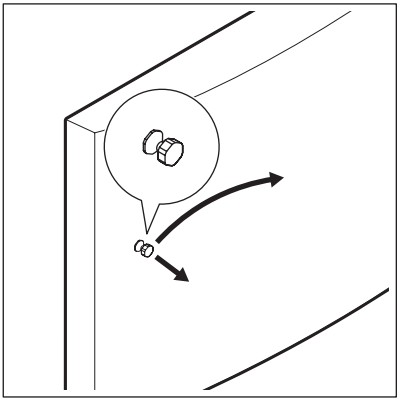

To reverse the door handles:

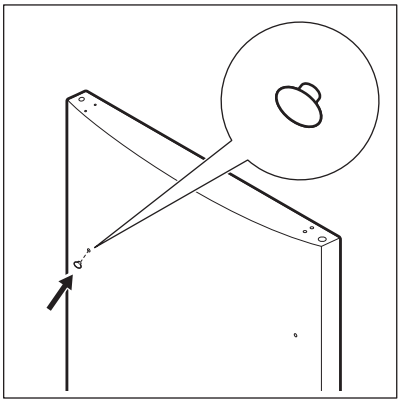

1. Remove and discard the button plugs from the front of the refrigerator and freezer doors.

16 WATER SUPPLY CONNECTION

Before Installing The Water Supply Line

NOTE

Automatic ice makers are optional accessories that you may install in most models at any time. Visit Frigidaire.com for information about Ice Maker Kit 117000.

WARNING!

To avoid electric shock, which can cause death or severe personal injury, disconnect the appliance from the electrical power before connecting a water supply line to the appliance.

CAUTION!

To avoid property damage:

- User stainless steel braided tubing for the water supply line. Do not use water supply tubing made of 1/4" plastic. Plastic tubing greatly increases the potential for water leaks, and the manufacturer will not be responsible for any damage if you use plastic tubing for the supply line.
- Do not install water supply tubing in areas where temperatures fall below freezing.
- Chemicals from a malfunctioning softener can damage the ice maker. If the ice maker is connected to soft water, ensure that the softener is maintained and working properly.

IMPORTANT

Ensure your water supply line connections comply with all local plumbing codes.

You will need

- Basic tools: adjustable wrench, flat-blade screwdriver, and Phillips™ screwdriver.
- Access to a household cold water line with water pressure between 30 and 100 psi.
- A water supply line made of stainless steel tubing. To determine the length of tubing needed, measure the distance from the ice maker inlet valve at the back of the appliance to your cold water pipe. Then add approximately 6 ft (1.8 m) to ensure you can move the appliance for cleaning.
- A shutoff valve to connect the water supply line to your household water system. Do not use a self-piercing type shutoff valve.
- Do not reuse compression fitting or use thread seal tape.

NOTE

Check with your local building authority for recommendations on water lines and associated materials prior to installing your new refrigerator. Depending on your local/state building codes, Frigidaire recommends:

- for homes with existing valves its Smart Choice® water line kit 5304437642 with a 6 ft stainless steel water line.
- for homes without an existing valve, we recommend Smart Choice® water line kit 5304493869 with a 6 ft polyline waterline.

Please refer to Frigidaire.com for more information.

Installing the water supply line

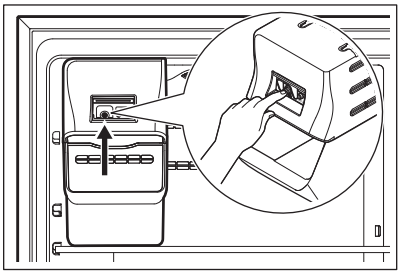

NOTE

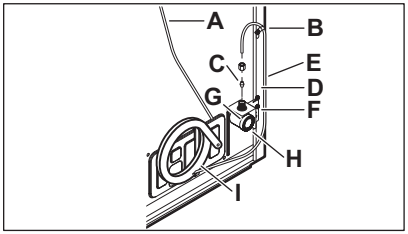

These instructions do not cover after market ice maker installation. Instructions in after market ice maker kit should be used.

To connect water supply line to ice maker inlet valve:

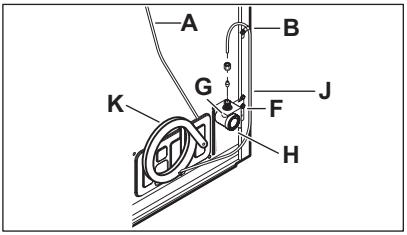

1. Disconnect refrigerator from electric power source.
2. Place end of water supply line into sink or bucket. Turn on water supply and flush supply line until water is clear. Turn off water supply at shutoff valve.
3. Remove plastic cap from water valve inlet and discard cap.
4. Depending on the tubing you use:
   - Copper tubing - Slide brass compression nut, then ferrule (sleeve) onto water supply line. Push water supply line into water valve inlet as far as it will go (1/4" / 6.4 mm). Slide ferrule (sleeve) into valve inlet and finger tighten compression nut onto valve. Tighten another half turn with a wrench; do not over tighten.
   - Braided flexible stainless steel tubing - The nut is already assembled on the tubing. Slide nut onto valve inlet and finger tighten nut onto valve. Tighten another half turn with a wrench; do not over tighten.
5. With steel clamp and screw, secure water supply line to rear panel of the appliance.

6. Coil excess water supply line (copper tubing only), about 2.5 turns, behind refrigerator as shown and arrange coils so they do not vibrate or wear against any other surface. Do not kink tubing.
7. Turn on water supply at shutoff valve and tighten any connections that leak.
8. Reconnect refrigerator to electrical power source.
9. Turn the ice maker on.

18 ICE MAKER

Automatic ice maker

NOTE

Automatic ice makers are optional accessories that you may install in most models at any time. Visit Frigidaire.com for information about ice maker kit 117000.

If your appliance has an automatic ice maker, it will produce minimal ice during the first 24 hours of operation. Air in new plumbing lines may cause the ice maker to cycle 2 or 3 times before making a full tray of ice. With no usage, it will take approximately 1 to 2 days to fill the ice container.

New plumbing connections may cause the first production of ice cubes to be discolored or have an odd flavor. Discard the ice produced during the first 24 hours.

NOTE

The ice maker is shipped in the ON position. To ensure proper function for your ice maker, hook up the water supply immediately or turn the ice maker OFF. If the ice maker is on and the water supply is not connected, the water valve will make a loud chattering noise.

Turning ice maker on

After connecting the plumbing, open the water supply valve. Place the ice container under the ice maker, pushing it as far back as possible.

Press the ice maker's On/Off ⏻ button.

Turning ice maker off

To stop the ice maker, press the ice maker's On/Off ⏻ button. The ice maker regulates the ice production and stops making ice when full and starts again when ice is low in the ice container.

Ice production

The ice maker produces 2 to 2.5 lbs of ice every 24 hours depending on usage conditions. Ice is produced at a rate of 10 cubes every 100 to 160 minutes.

NOTE

Set the freezer to a colder setting to increase the output of the ice maker. Allow 24 hours for the temperature to stabilize.

NOTE

Do not place the ice container in a dishwasher.

Cool down period

To ensure safe food storage, allow the appliance to operate with the doors closed for at least 8 hours before loading it with food.

NOTE

When first turning the appliance on, adjust the control to Recommended. After 24 hours, adjust the controls as needed.

Freezer control

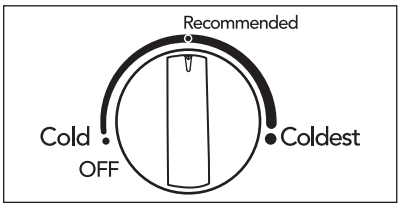

All models

NOTE

If your appliance is in a garage or area where the temperature is below 50 °F, adjust the freezer control to the coldest setting to improve performance.

Refrigerator Controls

varies by model

NOTE

Adjusting the refrigerator temperature control to OFF turns off the compressor and prevents the refrigerator from cooling, but does not disconnect the power to the light bulb and other electrical components. To turn off power to your refrigerator, you must unplug the power cord from the wall outlet.

Temperature Adjustment

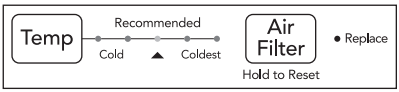

Adjust the temperature gradually: adjust the knobs in small increments, allowing the temperature to stabilize.

- For colder temperatures, adjust the control toward Coldest.
- For warmer temperatures, adjust the control toward Cold.

Adjusting the refrigerator control will change temperatures in both compartments. The freezer control can be left at the factory preset (Recommended) or adjusted as desired.

To maintain temperature, a fan circulates air in the refrigerator and freezer compartments. For good circulation, do not block cold air vents with food items.

Gallery and Professional

Temperature adjustment

Adjust the temperature gradually: adjust in small increments, allowing the temperature to stabilize.

- For colder temperatures, press the Temp button to change the temperature setting toward Coldest.
- For warmer temperatures, press the Temp button to change the temperature setting toward Cold.

NOTE

Pressing the Temp button will scroll through the 5 temperature settings toward the coldest setting, and then loop back to the least coldest setting.

Adjusting the refrigerator control will change temperature in both compartments. The freezer control can be left at the factory preset (Recommended) or adjusted as desired.

To maintain temperatures, a fan circulates air in the refrigerator and freezer compartments. For good circulation, do not block cold air vents with food items.

Air Filter

The filter status light on the control panel will prompt you to replace the filter after 6 months.

After replacing the air filter, the air filter status on the control panel should be reset. To reset, press and hold for 3 seconds.

Door Alarm

If the door is left open for 5 or more minutes, the door alarm will sound. Clear the alarm by closing the door or by pressing any button.

Sabbath Mode (Frigidaire Gallery/ Professional)

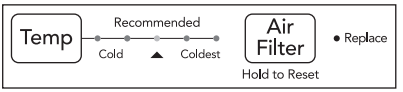

The Sabbath mode is a feature that disables portions of the refrigerator and its controls in accordance with observance of the weekly Sabbath and religious holidays within the Orthodox Jewish community.

NOTE

The temperature setting is not affected by the Sabbath mode.

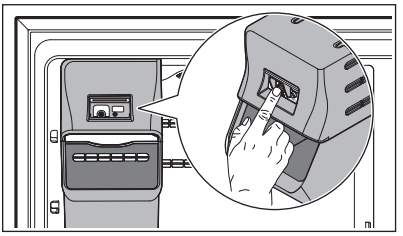

To enter Sabbath mode

1. Press and hold the Temp and Air Filter buttons for 5 seconds.

One LED on each side of Recommended setting will be lit while the appliance is in Sabbath mode.

2. Press the ice maker's On/Off power switch to turn the ice maker off. The LED will not be illuminated.

NOTE

Although you have entered the Sabbath mode, the ice maker will complete the cycle it had already initiated. The ice cube compartment will remain cold and you can make new ice cubes with standard trays.

To exit Sabbath mode, reverse the steps above.

NOTE

While in Sabbath mode, neither the lights not the control panel will work until Sabbath mode is deactivated. The refrigerator stays in Sabbath mode after power failure recovery. Deactivate it with the buttons on the control panel.

For further assistance, guidelines for proper use and a complete list of models with the Sabbath feature, please visit star-k.org.

Door Storage

Door bins, shelves, and racks conveniently store jars, bottles, and cans. You can quickly select frequently used items.

Door Bin

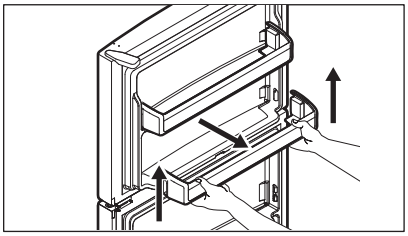

Door bins can accommodate gallon-sized plastic drink containers and economy- sized jars and containers.

To remove the door bin:

1. Lift up the bin.
2. Pull it straight out.

To install the door bin:

1. Push the bin back and down into the locking tabs.
2. The bin sides will lock into the tabs.

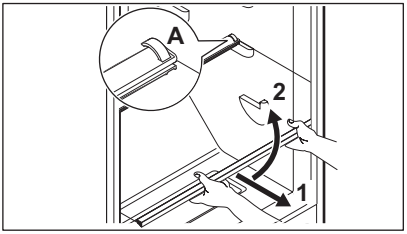

Shelf adjustment

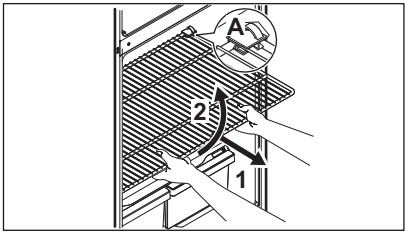

Adjust the shelves to suit individual needs. Before adjusting the shelves, remove all food.

To adjust shelves, slide the shelf by moving it forward and lifting it upward.

To replace shelves, insert the rear of the shelf into any pair of shelf rails and carefully push the shelf back into position, making sure the shelf clips (A) go in the notch in the liner.

Glass Shell

Wire Shelf

CAUTION!

When reinstalling the shelf, ensure the shelf clip is attached to the liner and holds it in place.

CAUTION!

Do not clean glass shelves or covers with warm water when they are cold. Shelves and covers may break if exposed to sudden temperature changes or impact, such as bumping. Tempered glass is designed to shatter into many small, pebble-size pieces. This is normal. Glass shelves and covers are heavy. Use both hands when removing them to avoid dropping.

NOTE

To avoid personal injury or property damage, handle tempered glass shelves carefully. Shelves may break suddenly if nicked, scratched, or exposed to sudden temperature change.

Deli Drawer (some models)

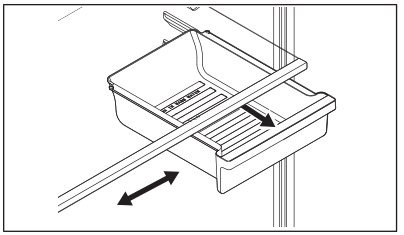

IMPORTANT

Using the deli drawer to store fruits and vegetables may result in frozen produce. The deli drawer is designed to stay colder than the crisper drawers and should only be used to store lucheon meets, spreads, cheeses, and other deli items. Store vegetables and/or fruit in the crisper drawers.

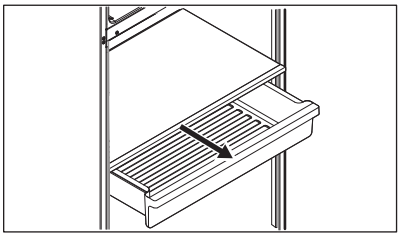

NOTE

Be sure to support the glass when removing the drawer.

Store deli meats or spreads in the half- or full-width sliding deli drawer found in the middle section of your appliance.

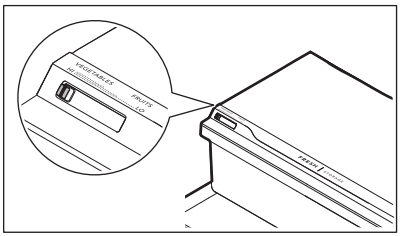

Half-width sliding deli drawer

Full-width sliding deli drawer

Crisper Humidity Control (some models)

The crisper humidity control, present on the crisper drawers of some models, allows you to adjust the humidity within the crisper. This can extend the life of fresh vegetables that keep best in high humidity.

IMPORTANT

Store vegetables and/or fruit in the crisper drawers.

NOTE

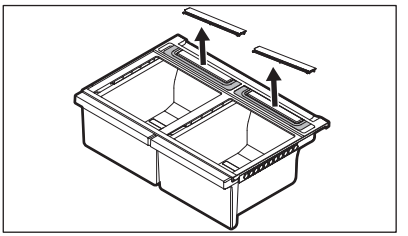

Leafy vegetables keep best when stored with the humidity control set on high humidity, or in a drawer without a humidity control. This keeps incoming air to a minimum and maintains maximum moisture content. Store non-leafy vegetables and fruits still in their skins at the low humidity setting.

Auto-humidity control (some models)

Some crispers have an auto-humidity control at the rear of each crisper under the humidity control cover.

To remove the auto humidity control for cleaning:

1. Reach to the back of the humidity control cover.
2. Pull up on the cover.
3. Pull the cover toward the back of the cabinet and remove.
4. Clean the humidity control with hot soapy water.
5. Replace the clean humidity control cover by reversing the steps above. Repeat for both crispers.

NOTE

We do not recommend replacing the auto-humidity membrane unless it becomes damaged or ruined. If the membrane becomes soiled, it can be washed with soap and water. Ensure the membrane is dry before replacing it in the cover and back in the appliance.

Understanding the sounds you may hear

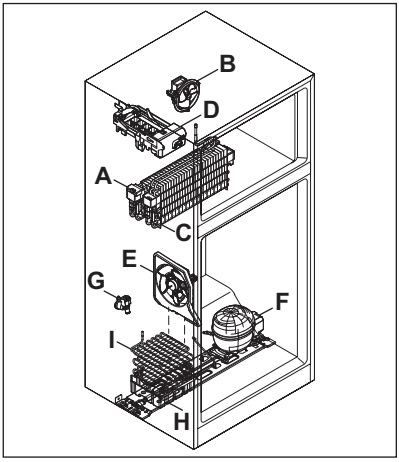

Your new, high-efficiency appliance may introduce unfamiliar sounds. These sounds normally indicate your appliance is operating correctly. Some surfaces on floors, walls, and kitchen cabinets may make these sounds more noticeable.

NOTE

Energy efficient foam in your appliance is not a sound insulator.

Following is a list of major components in your appliance and the sounds they can cause:

A. Evaporator. Refrigerant through the evaporator may create a boiling or gurgling sound.
B. Evaporator fan. You may hear air being forced through the refrigerator by the evaporator fan.
C. Defrost heater. During defrost cycles, water dripping onto the defrost heater may cause a hissing or sizzling sound. After defrosting, a popping sound may occur.
D. Automatic Ice maker. When ice has been produced, you will hear ice cubes falling into the ice bin.
E. Condenser fan. You may hear air being forced through the condenser.
F. Compressor. Modern, high-efficiency compressors run much faster than previous models. The compressor may have a noticeable hum or pulsating sound during operation.
G. If your appliance is equipped with an automatic ice maker, you will hear a buzzing sound as the water valve opens to fill the ice maker during each cycle.
H. Drain pan (not removable). You may hear water dripping into the drain pan during the defrost cycle.
I. Condenser. May create minimal sounds from forced air.

IMPORTANT

Ice maker models only: If the ice maker is not connected to the household water supply, you may hear a loud chattering noise. Turn off the ice maker by pressing the green On/Off power switch (green LED light will turn off) until you install the water supply line.

NOTE

During automatic defrost cycle, a red glow in the back wall vents of your freezer compartment is normal.

Protecting your investment

Keeping your appliance clean maintains its appearance and prevents odor build-up. Wipe up any spills immediately and clean the freezer and fresh food compartments at least twice a year. When cleaning, take the following precautions:

- Never use chloride or cleaners with bleach to clean stainless steel.
- Do not wash any removable parts in a dishwasher.
- Always unplug the electrical power cord from the wall outlet before cleaning.
- Do not remove the serial plate. Removal of your serial plate voids your warranty.
- Remove adhesive labels by hand. Do not use razor blades or other sharp instruments which can scratch the appliance surface.

Do not use abrasive cleaners such as window sprays, scouring cleansers, brushes, flammable fluids, cleaning waxes, concentrated detergents, bleaches or cleansers containing petroleum products on plastic parts, interior doors, gaskets or cabinet liners. Do not use paper towels, metallic scouring pads, or other abrasive cleaning materials or strong alkaline solutions.

Refer to the guide below for more details on caring and cleaning specific areas of your appliance.

NOTE

If you set your temperature controls to turn off cooling, power to lights and other electrical components will continue until you unplug the power cord from the wall outlet.

CAUTION!

Pull the appliance straight out to move it. Shifting it from side to side may damage flooring. Be careful not to move the appliance beyond the plumbing connections.

IMPORTANT

If you store or move your appliance in freezing temperatures, be sure to completely drain the water supply system. Failure to do so could result in water leaks when the appliance is put back into service. Contact a service representative to perform this operation.
